The gene may be used to produce PAL recombinantly. Plants contg. the PAL gene can contain a large amt of phenyl propanoid isoflavonoid.

                                                                                                                                                                                    coumerate CoA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway. The polynucleotides can be used for modulating lignin content, lignin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lignin biosynthetic pathway, and for producing a plant having altered lignin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any
                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes isolated polynucleotides and proteins encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), coumarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate:CoA ligase (4CL), coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG),
                                                                                                                            organism and for PCR amplification. The lianin content can be efficiently modified using the polynucleotides. AAAb7908 to AAAb8201 and AAB16341 to AAB16449 represent polynucleotide and protein sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polynuclectide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and

mechanical stress tolerance, disease resistance, insect pest resistance, plant stature, leaf and stem colour. The present sequence represents a Lolium perenne (perennial ryegrass) nucleotide sequence from the present hybridisation probes to screen libraries from the desired plant. Short segments of (I) or its fragment are useful in amplification protocols to amplify longer nucleic acids or its fragments encoding homologous genes from DNA or RNA. (I) or its fragments are useful as molecular genetic markers for quantitative trait loci (QTL) tagging, QTL mapping, DNA fingerprinting, and in marker assisted selection, particularly in ryegrass and fescues, and in forage and turf grass improvement, e.g. tagging QTLs for herbage quality traits, dry matter digestibility, ryegrass (Lolium perenne) or fescue species. (1), its nucleotide sequence information and/or single nucleotide polymorphisms is useful as a molecular genetic marker. (I) can be used for modifying lighin biosynthesis and/or cellulose degradation in a plant to manipulate cell walls. (I) or its fragments are useful for isolating cDNAs and genes encoding homologous proteins from the same or other plant species, as The present invention describes a nucleic acid (1) or its fragment encoding caffeoyl-CoA 3-O-methyltransferase (CCOAMT), cinnamyl alcohol dehydrogenase (CDD), caffeic acid O-methyltransferase (OMT), cinnamate-4-hydroxylase (C4H), cinnamoyl-CoA reductase (CCR), peroxidase (PER), cellulase (CELL), ferulate-5-hydroxylase (F5H), phenylalanine ammonia lyase (PAL) or 4-coumarate:CoA ligase (4CL) from perennial invention.

polynowheatides can be used for modulating lighth content, lighth composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lighth biosynthetic pathway, and for producing a plant having altered lighth content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any (CCR), phenylalanine ammonia-lyase (FAL), 4 coumaraté:COA liqase (4CL), coniferol qlucosyl transferase (CGF), coniferon beta glucosidase (CGF), laccase, peroxidase, ferulate-5-hydroxylase (FSH), alpha-amylase, caffere acid methyl transferase, caffeoyl FOA methyl transferase, coumerate CoA ligase, cytochrome P450 lixiA, diphenol oxidase, flavanol glucosyl transferase, tlavenoid hydroxylase, and isoliavone reductase, which are involved in the lignin biosynthetic pathway. The encoding and representing the enzymes cinnamate 4-hydroxyiase (C4H), commarate 3-hydroxylase (C3H), phenolase (PNL), 0-methyl transferase (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and The present invention describes isolated polynucleotides and proteins Claim 1; Page 132-133; 213pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (Lactuca sativa) phenylalanine ammonia-lyase (LSPAL) enzymes, and the polynucleotide sequences encoding them. An antibody that binds to a PAL enzyme is useful for measuring the relative amount of PAL levels in a fissue. The polynucleotide sequences encoding PAL arc useful in the preparation of plant expression constructs for modifying features of the response of a plant cell to wounding, damage or other injury from disease. Disruption or down-regulation of PAL activity can be used to reduce the browning response to wounding in vegetable crops. The present sequence represents lettuce LSPAL1 enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Fig 6; 46pp; English.

The polynucleotide sequences encoding PAL are useful in the preparation of plant expression constructs for modifying features of the response of a plant cell to wounding, damage or other injury from disease. Disruption or down-regulation of PAL activity can be used to reduce the browning response to wounding in vegetable crops. The present sequence represents lettuce LsPAL2 enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polynucleotide useful in preparing plant expression constructs to modify the response of a plant cell to wounding, damage or other injury from disease causing organisms or from plant pests \,\cdot\,

They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any organism and for PGR amplification. The lighth content can be efficiently modified using the polynucleotides. AAA57908 to AAA68201 and AAB16341 to AAB16449 represent polynucleotide and protein sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleotides can be used for modulating lighin content, lighin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in liquin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            coumerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          to amplify longer nucleic acids or its fragments encoding homologous genes from DNA or RNA. (1) or its fragments are useful as molecular genetic markers for quantitative trait loci (QTL) tagging, QTL mapping, DNA fingerprinting, and in marker assisted selection, particularly in ryegrass and fescues, and in forage and turf grass improvement, e.g. tagging QTLs for herbaye quality traits, dry matter digestibility, mechanical stress tolerance, disease resistance, insect pest resistance, plant stature, leaf and stem colour. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           encoding caffeoyl-CoA 3-0-methyltransferase (CCOAMT), cinnamyl alcohol dehydrogenase (CAD), caffeic acid 0-methyltransferase (OMT), cinnamate-4-hydroxylase (C4H), cinnamoyl-CoA reductase (CCB), peroxidase (PELL), ferulate-5-hydroxylase (F5H), phenylalanine ammonia lyase (PAL) or 4-coumarate:CoA ligase (4CL) from perennial ryegrass (Lolium perennc) or fescue species. (1), its nucleotide sequence information and/or single nucleotide polymorphisms is useful as a molecular genetic marker. (1) can be used for modifying lighin biosynthesis and/or cellulose degradation in a plant to manipulate cell walls. (1) or its fragments are useful for isolating cDNAs and genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding homologous proteins from the same or other plant species, as hybridisation probes to screen libraries from the desired plant. Short segments of (I) or its fragment are useful in amplification protocols
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 30; Fig 63; 436pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acid encoding lignification and cellulase enzymes or their related enzymes useful for modifying lignin biosynthesis and cellulose degradation in plants to manipulate plant cell wall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29-SEP 2000; 2000AU 0000419
